Gamal Abdul Hameed Nasef Newysar	19015550

- # Code Flow:
  - The setup function: it creates a display list for the spacecraft and sets up lighting and material properties.
  - The animate function: it is used to update the angles of the asteroids.
  - The drawOrbits function: it is implemented to draw the orbits of the planets.
  - The drawScene function: it draws the entire scene. It sets up the camera position, applies rotations, and renders the spacecraft, Sun, and asteroids.

- # Screenshots:
